

TruMelt

10% Magnesium Pellets

Recommended Uses | Concrete, sidewalks, steps and pavers ♦ Safer around pets and turf

PROS

- ♦ Melting effectiveness to -10° F
- ♦ Increased concrete protection against freeze/thaw cycles
- ♦ Safer for the user, pets and vegetation than calcium based products

| | |
|-----------------------------|-----------------------------|
| Melting Performance | -10°F |
| Concrete Protection | Good |
| Slip and Fall Safety | Good |
| Free Flowing | Best |
| User, Turf and Pet Friendly | Better |
| Clean and Non Tracking | Better |
| Packaging | 50-lb bags, 56 bags/skid |

Product Performance

Full Ingredient Disclosure

TruMelt 10% is a premium blend of 90% oven-dried, screened sodium chloride and 10% magnesium pellets. Snow fighting professionals, looking for full disclosure of ingredients, need to look no further. TruMelt is true to its name; we disclose the truth about the ingredients and real world effectiveness of our quality ice melt. TruMelt 10% is the premier choice for commercial and residential applications. Due to the inclusion of 10% magnesium pellets, it melts effectively down to a low temperature of -10°F.

Clean & Free-Flowing

TruMelt 10% is screened to optimal crystal size for maximum traction and accurate spreading. Small dusty fines and large crystals above ¼ inch in diameter are removed. Because it is clump-free, TruMelt is easy and efficient to apply. It is the most free flowing ice melt on the market. TruMelt 10% is lightly tinted with a non-staining organic (biodegradable) green colorant to enhance accuracy and visibility. It is non-staining and safe for sidewalks and floors.

Concrete Safety

TruMelt 10% is safer on concrete surfaces than other less concentrated blends due to the inclusion rate of 10% magnesium pellets. Using 10% magnesium pellets lowers the melting point, minimizes freeze/thaw cycles and provides more protection from concrete damage, such as spalling and chipping. **However, for greater protection of concrete surface and melting power, use TruMelt 12% or TruMelt 20%.** In addition, TruMelt 10% is safer for pets and turf than calcium-based products. If applied at recommended rates, it will not burn vegetation or pet's paws.
