

# **TruMelt 20% Magnesium**

**Recommended Uses** | Concrete, sidewalks, steps and pavers • Safer around pets and turf

## **PROS**

- Melting effectiveness to -12° F
- Increased concrete protection against freeze/thaw cycles
- Safer for the user, pets and vegetation than calcium based products

Melting Performance	-12°F
Concrete Protection	Best
Slip and Fall Safety	Better
Free Flowing	Best
User, Turf and Pet Friendly	Best
Clean and Non Tracking	Best
Packaging	50-lb bags, 56 bags/skid

### **Product Performance**

#### **Full Ingredient Disclosure**

TruMelt 20% is a premium blend of 80% oven-dried, screened sodium chloride and 20% magnesium pellets. Snow fighting professionals, looking for full disclosure of ingredients, need to look no further. TruMelt is true to its name; we disclose the truth about the ingredients and real world effectiveness of our quality ice melt. TruMelt 20% is the absolute premier ice melt blend for commercial and residential applications. Due to the inclusion of 20% magnesium pellets, it melts effectively down to a low temperature of -12°F.

## **Clean & Free Flowing**

TruMelt 20% is screened to optimal crystal size for maximum traction and accurate spreading. Small dusty fines and large crystals above ¼ inch in diameter are removed. Because it is clump-free, TruMelt is easy and efficient to apply. It is the most free flowing ice melt on the market. TruMelt 20% is lightly tinted with a non-staining organic (biodegradable) green colorant to enhance accuracy and visibility. It is non-staining and safe for sidewalks and floors.

## **Concrete Safety**

TruMelt 20% is safer on concrete surfaces than other less concentrated blends due to the inclusion rate of 20% magnesium pellets. Using 20% magnesium pellets provides more melting power and lowers the melting point. This minimizes freeze/thaw cycles and provides more protection from concrete damage, such as spalling and chipping. In addition, TruMelt 20% is safer for pets and turf due to the gentle nature of magnesium pellets. If applied at recommended rates, it will not burn vegetation or pet's paws.
