

Halite Solar Salt Crystals

Recommended Uses | Asphalt driveways and parking areas ♦ Safer around pets and turf

PROS

- ♦ Clean solar salt
- ♦ Economical and effective
- ♦ Dried and free flowing

CONS

- ♦ Melts effectively only to 5° F
- ♦ Greater risk of concrete damage

Melting Performance	5°F
Concrete Protection	Fair
Slip and Fall Safety	Fair
Free Flowing	Great
User, Turf and Pet Friendly	Good
Clean and Non Tracking	Great
Packaging	50-lb bags, 56 bags/skid

Product Performance

Full Ingredient Disclosure

TruMelt Halite is 99.5% pure oven dried, screened solar salt. Snow fighting professionals, looking for full disclosure of ingredients, need to look no further. TruMelt is true to its name; we disclose the truth about the ingredients and real world effectiveness of our quality ice melt. Halite is an economical choice for commercial and residential applications.

Clean & Free-Flowing

TruMelt Halite is screened to optimal crystal size for maximum traction and accurate spreading. Small dusty fines and large crystals above ¼ inch in diameter are removed. Because it is clump-free, TruMelt is easy and efficient to apply. It is the most free-flowing ice melt on the market. Halite is non-staining and safe for sidewalks and floors.

Pets' & Landscape Safety

TruMelt Halite is safer for pets and turf than calcium-based products. If applied at recommended rates, it will not burn vegetation or pet's paws. **For greater protection of concrete surfaces and melting power, use TruMelt 10%, TruMelt 12%, or TruMelt 20%.**
